

Questions for Oral Answers

1. $\frac{1}{2} + \frac{1}{3} = \frac{5}{6}$
 $\frac{1}{2} - \frac{1}{3} = \frac{1}{6}$
 $\frac{1}{2} \cdot \frac{1}{3} = \frac{1}{6}$

2. $\frac{1}{2} + \frac{1}{4} = \frac{3}{4}$
 $\frac{1}{2} - \frac{1}{4} = \frac{1}{4}$
 $\frac{1}{2} \cdot \frac{1}{4} = \frac{1}{8}$

3. $\frac{1}{3} + \frac{1}{6} = \frac{1}{2}$
 $\frac{1}{3} - \frac{1}{6} = \frac{1}{6}$
 $\frac{1}{3} \cdot \frac{1}{6} = \frac{1}{18}$

4. $\frac{1}{4} + \frac{1}{8} = \frac{3}{8}$
 $\frac{1}{4} - \frac{1}{8} = \frac{1}{8}$
 $\frac{1}{4} \cdot \frac{1}{8} = \frac{1}{32}$

5. ($\frac{1}{5} + \frac{1}{10}$) $\frac{1}{5} = \frac{3}{10}$
 $\frac{1}{5} - \frac{1}{10} = \frac{1}{10}$
 $\frac{1}{5} \cdot \frac{1}{10} = \frac{1}{50}$

6. $\frac{1}{6} + \frac{1}{12} = \frac{1}{4}$
 $\frac{1}{6} - \frac{1}{12} = \frac{1}{12}$
 $\frac{1}{6} \cdot \frac{1}{12} = \frac{1}{72}$

7. $\frac{1}{8} + \frac{1}{16} = \frac{3}{16}$
 $\frac{1}{8} - \frac{1}{16} = \frac{1}{16}$
 $\frac{1}{8} \cdot \frac{1}{16} = \frac{1}{128}$

$\frac{1}{9} + \frac{1}{18} = \frac{1}{6}$
 $\frac{1}{9} - \frac{1}{18} = \frac{1}{18}$
 $\frac{1}{9} \cdot \frac{1}{18} = \frac{1}{162}$

$\frac{1}{10} + \frac{1}{20} = \frac{3}{20}$ $\frac{1}{10} - \frac{1}{20} = \frac{1}{20}$
 $\frac{1}{10} \cdot \frac{1}{20} = \frac{1}{200}$
